

# Filter regulator kit

<b>Product group</b>	517
<b>Manufacturer</b>	Camozzi
<b>Inlet</b>	G 1/8" F, G 1/4" F or G 3/8" F
<b>Outlet</b>	G 1/8" F, G 1/4" F or G 3/8" F
<b>Max working pressure (Bar)</b>	10
<b>Min working pressure (Bar)</b>	0.5

Filter Regulator Kit is a module assembled air treatment unit to ensure the air quality in the compressed air systems. Manually operated on-off valves for safe shutdown of compressed air. The filter regulator has a 25  $\mu$ m particle filter that removes condensate and particles. The condensate is drained when the filter regulator is pressure-free, or manual drainage. The distribution block provides the possibility to connect several compressed air units at the same time.
