## HYDROSCAND SKÄRRINGSKOPPLINGAR

## PRODUKTGRUPP 600

Hydroscand skärringskopplingar används för rörledningar, t.ex. inom allmän maskinbyggnad, i huvudsak inom hydraulik och pneumatik. Hydroscand har även syrafasta skärringskopplingar för aggressiva media respektive omgivning. Arbetstryck / PN upp till 63 MPa / 630 Bar, för rör 4-42 mm diameter utvändigt. Tryckvärden enligt DIN 2353.

Skärringskopplingar kännetecknas av en mycket stabil rörfästning, stor motståndskraft mot vibrationer och tryckstötter. Kopplingarna kan demonteras/återmonteras ett flertal gånger.

Vid montering av skärningen pressas ringens två eggar in i röret och formar en mekanisk hållfunktion. Egg 1 har redan startat inträngningen innan egg 2 startar inskärningen i röret. Efter avslutat arbete trycks del 3 av ringen in mellan konan och röret så att inga vibrationer transporteras till skäreggarna. Del 4 säkrar radiell rörelse. Designen av ringprofilen medger en mycket stark axiell och radiell hållkraft. Påkänningar upptas av hela skärningens längd.

## MATERIAL

Hydroscands skärringskopplingar är tillverkade av automatstål eller från smidda ämnen. Standard för ytbehandlingen är E-coated. E-coated är namnet på den ytbehandling som vi använder på våra kopplingar. Ytbehandlingen är CR<sup>6</sup>-fri och därmed skonsammare för både hälsa och miljö.

Temperaturer upp till +200°C. Tätningsringar standard Perbuan upp till +90°C.

## ANSLUTNINGAR

Withworth rörgänga G, koniska rörgångor R, NPTF koniska, UNF, metrisk. Skärringskona enligt DIN W 3861 24° kona.

## GODKÄNNANDE

Hydroscand kan leverera kopplingar av bland annat följande normer/certifikat: DVGW, Norske Veritas, Germanischer Lloyd, ISO 9002.

## MONTERINGSANVISNING

1. Kapa röret i 90°-vinkel (använd inte rullskärare av typen rörkapare), avlägsna alla grader in- och utvändigt.
2. Olja in 24°-konan, kopplingskroppen, skärningen samt muttern med därför avsedd olja. Till stålkopplingar används lämpligen vanlig mineralolja och till kopplingar i rostfritt eller syrafast material används Hydros cand specialolja art.nr. 5650-00-05
3. Placera muttern och skärningen på röret som bilden visar. Skärningens krage ska vara vänd mot muttern.
4. Håll röret mot röranslaget i kopplingen. Dra åt muttern tills man ej kan dra runt röret för hand.
5. Dra ytterligare 3/4 varv, röret får ej rotera. På detta sätt kommer kanten på muttern att skära in i den yttre delen av röret tillräckligt djupt och pressa upp en synlig vall medan den andra skärkanten tätar röret.
6. Lossa muttern och se till att det finns en tydlig vall runt hela röret. Vallen skall täcka 80% av skärningens främre kant. Denna kontroll är absolut nödvändig för allas säkerhet. Om vallen inte är tillräcklig måste förmonteringen göras om. Skärningen kan ofta efter montage fortfarande rotera på röret. Detta är normalt och påverkar ej tätheten.
7. Slutmontage.

Återmontera muttern på kopplingen för hand tills ett visst motstånd uppstår, dra sedan åt muttern ytterligare 1/4 varv.

**Slutmontering av förmonterade kopplingar**

Skruva åt muttern för hand så långt det går, dra därefter åt muttern ytterligare ca 1/2–3/4 varv. Efter detta är kopplingen klar att användas. Detta gäller för samtliga av våra förmonterade kopplingar.

**OBS!**

All förmontering av kopplingar i rostfritt stål måste utföras med ett förmonteringsverktyg (block eller maskin). Specialolja, artikelnr. 5650-00-05, skall användas för bästa resultat.
